Waterford

More than 75 persons attended the fifth annual reunion of the Waterford school Saturday afternoon. At the business meeting Mrs. Helen Mehler was elected president, Arthur Walter, secretary, treasurer, and Thirza Sherk, corresponding secretary of the group. An interesting program followed and included a short talk by William Spalding on alumni associations; two vocal solos by Mary Buck; Mrs. Mamie Baker spoke on the teacher's responsibility; Mrs. Martin Wager gave three solos; Dr. John Warren spoke on the parents' responsibility; and Mrs. Elida Erb, 81, oldest living graduate of the Waterford school, talked of her school days here. Among those who came from considerable distance were Mrs. Nettie Bird Osburn, accompanied by her husband, from St. Cloud, Fla.; Mrs. Mae King Travis, Mrs. Maude Lownds King of Poughkeepsie, N. Y., and Mrs. Anna Barker of Springfield, Mass.

Ice Cream and Cantaloupe

How about ice cream and cantaloupe for a porch supper during hot weather? Make it something special — cantaloupe a la mode, garnished with fresh peaches and blackberries for good measure.

The vanilla ice cream for which we are giving you the recipe is going to be one of the easiest, nicest and most economical you have ever made. Not too rich, but smooth and full-bodied. Made with only one part cream to three parts milk, which is one-third to one-sixth as much as most recipes call for — a feature that will delight your household budget and prove a boon to those of your family who love ice cream but find it too fattening. And using no eggs, so you can guess how simple it is. All this because it is a rennet-custard ice cream, and rennet has a way with milk, as you rennet-custard fans already know. But why should we tell you about it, when it's so easy to try it for yourselves?

Vanilla Ice Cream in Cantaloupe
2 rennet tablets
2 tablespoons cold water
3 cups milk
1 cup heavy cream
1 cup sugar
1 tablespoon vanilla

Dissolve rennet tablets in cold water. Warm the milk, cream, sugar and flavoring to **WARM** not hot, stirring constantly. Remove from stove. Add dissolved tablets, stir a few seconds; pour immediately into freezer can and freeze at normal temperature for 1 1/2 hours. Press in ice and salt mixture 4 parts ice to 1 part ice cream. Turn freezer out 40 minutes. Remove can, unpack with 1/2 cup salt and let stand until ready to serve. Serve in halves of thoroughly chilled cantaloupes, with a garnish of sugared sliced peaches and fresh blackberries. Serves 8.

ARE PLANNING TO PLOW MARSHLAND

Is Project Under Way in Fenton Soil District

Several acres of marshland in the Fenton Soil Conservation District have been plowed during the past week. This land, now unimportant, will be used either for crops or reed canary grass pasture on the Bruce Fawcett and the Dale Sharp farms in Deerfield township. Since this type of land is one of the most productive found in Michigan, the Directors of the Fenton District have made it possible for land owners who are cooperating with the District to receive this type of plowing.

It is planned to plow more than a hundred acres of marshland during the next few weeks in the Fenton District. Some of the marshes to be plowed will be on the farms of Elroy G. Warner, A. F. Wilson, Swanebeck Bros., Charles Whitman, George Petts and Albert Holtforth.

Farmers living in the Fenton Soil Conservation District and interested in marshland plowing should consult the District Director residing in their township.

Many farmers in the Fenton District who have seeded their wet marshland to reed canary grass pasture during the past two years are pleased with the additional pasture that it has provided, especially during the late summer period when the bluegrass pasture is of little value. In this way the pressure on hill land is relieved and better cover is retained on steep hill land, thereby eliminating any future sheet or gully erosion. A definite improvement of permanent bluegrass should be realized if reed canary grass or alfalfa-brome grass can be utilized during the July and August grazing period.

The White Lake Presbyterian Church reached its 105th anniversary on Sunday. Archie George, assisted by Mrs. George, assisted in the service with a trombone solo and "Jimmy" Lemmon, grandson of Rev. and Mrs. George A. Hill, gave a piano solo.

Still Fishing

Worms and a pole cast in the woods are getting for many lads like this in Michigan fish that fully equipped anglers would prize. Continued hot weather sent fishermen out in full force on the state's thousands of lakes while fishing for bass, bluegills, walleyes and northern pike is reported good to excellent on inland waters of many districts. Fishing for panfish also is producing good crops on neighborhood lakes and streams.

Attending to His Job In Washington

The Clarkston News, Clarkston, Michigan. My dear Mr. Stamp:

During the past week a number of notices have appeared in the newspapers giving the impression that I agreed to speak at various places in the district.

Whoever is supplying these notices is doing so without authority from me and without any agreement on my part to debate anywhere.

Congress is in session and I am in Washington endeavoring to discharge my duty to the people of the 17th Congressional District of Michigan, which I have the honor and responsibility of representing.

Very sincerely yours,
George A. Dondoro.

For Homemakers

Canes of fruit bushes, such as raspberries, blackberries and dewberries, need summer pruning. R. E. Loree, of the Michigan State College horticulture department, reminds growers. Pruning not only induces sturdier cane growth, says Loree, but also increases the bearing surface of the canes.

Best time for pinching back the tips of the canes, says the horticulturist, is when they attain the desired height, varying from 18 inches to three feet, according to the kind and variety. Black raspberries should be closest pruned, and purple raspberries and blackberries, longest. Pinching back the tips encourages growth of side branches, and consequent increase in fruiting. Another advantage of tip pinching is that the canes are sturdier, and can more easily withstand storms, weight of snow, and weight of fruit.

Preferred time for removal of canes that have fruited is a disputed question, but Loree advises that for most varieties, immediately after fruiting has ceased is the best time to take out these canes. Roots of bramble fruits are perennials, while canes are biennial. Removal of the canes after fruiting permits a better growth of the first year canes, while burning of the old canes may, in addition, destroy injurious insects and diseases. The canes are not tough, and are easier to remove at that time, and at the same time, removal makes cultivation easier.

Prompt removal of old canes immediately after harvest is especially important where the cane blight, gray bark fungus, or the raspberry mite is present. The mites are often found in large numbers on the old canes, which in case of serious infestation should be removed and burned, and the new growth sprayed three times with a good grade of summer oil. This oil should be mixed one gallon of oil in one hundred gallons of water, and applied five days apart.

Cane blight and gray bark are likely to attack Chief and Latham raspberries. Where these diseases are present the canes should be removed and burned. Cane blight cannot be controlled by spray, but gray bark can, by applying a lime sulphur solution in early spring.

After the removal of the old canes the field should be well cultivated two or three times, and after the last cultivation, a cover crop of oats, barley, millet or some other suitable annual plant should be seeded between the rows. The cover crop will check fall growth, induce early ripening of wood, and will hold leaves and snow. It also adds organic matter to the soil.

Female houseflies may become great grandmothers in 60 days unless they are controlled or killed, according to an insect specialist in the federal department of agriculture. His surveys indicate one housefly may lay as many as 2,700 eggs during a lifetime of three months. Preventive measures include safe disposal of manure, garbage, sewage, decaying grass clippings and other refuse. Which leads C. B. Dibble, extension specialist in insect control at Michigan State College, to remind householders that low-cost borax is one of the most effective controls used as a powder. Lime, he cautions, does little, but borax does much to control prevalence.

Thoughtless motorboat operators whose noise and splashing have spoiled the fun of fishermen, bathers, and shore property owners are learning to beware conservation officers. Empowered with other peace officers to arrest persons making a nuisance of themselves with their motorboats on Michigan's inland waters, the conservation men are nabbing numerous offenders, particularly on highly developed southern lakes.

As amended in 1939, the law forbids operation of motorboats without mufflers, or "carelessly and heedlessly in wilful or wanton disregard of the rights and safety of others, or without due caution and circumspection and at a speed or in a manner so as to endanger or be likely to endanger any person or property."

Michigan stands first in the United States in the production of mint. There are several counties in the state, however, that produce this crop in commercial quantities; among these are Shiawassee, Gratiot, Sanilac, Eaton, Allegan, Van Buren, Berrien, Cass, St. Joseph and Branch along with Clinton.

The eastward flowing Tahquamenon of the upper peninsula is, perhaps, Michigan's most interesting river. It has the largest falls west of Niagara. It is celebrated as the river down which Hiawatha sailed:

"Down the rushing Tahquamenaw,
Sailed through all its bends and windings;
Sailed through all its deeps and shallows."

Registration Notice for General Primary Election, Tuesday, September 10, 1940

To the qualified electors of the Township of Independence, State of Michigan:

Notice is hereby given that in conformity with the "Michigan Election Law" I the undersigned Township Clerk, will, upon any day, except Sunday and a legal holiday, the day of any regular or special election or primary election, receive for registration the name of any legal voter in said Township not already registered who may apply to me personally for such registration. Provided, however, that I can receive no names for registration during the time intervening between the Second Saturday before any regular, special, or official primary election and the day of such election.

A TIMELY TIP TO TRUCK USERS

CHEVROLET TRUCKS LEAD IN SALES..

because they lead in economy, dependability and value!

TRUCK OWNERS WANT FACTS...CHEVROLET GIVES Certified Proof

On the longest test run ever conducted under the supervision of the A.A.A., a stock Chevrolet 1 1/2 ton truck turned in a record performance record. These facts are clearly outlined in a booklet titled "Says Who?" You may obtain it from your Chevrolet dealer or by writing to Chevrolet Motor Division, General Motors Sales Corp., General Motors Bldg., Detroit, Mich.

Chevrolet trucks lead in sales because they have the most desirable balance of power, economy and durability—power to do the job well, economy to do the job at low cost, and durability to stay on the job. That all adds up to value—exceptional value that has kept Chevrolet trucks out in front in sales—leading again in 1940, as they have led year after year. Consider modernizing some of your trucking equipment now—all models and types of Chevrolet trucks are still available at today's low price level.

COOL YOUR HOUSE

this easy and inexpensive way!

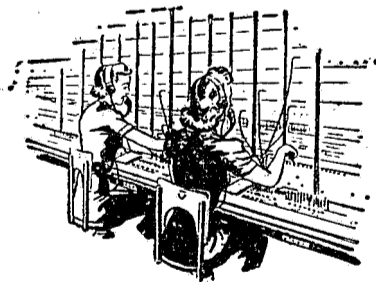

When you leave your car standing in the broiling sun all day with the windows tightly shut, it DOES get hot inside . . . a regular "bake-oven" temperature. But you can always cool it quickly by opening the windows and driving your car down the street.

In just the same way, the attic of your house stores up heat on hot days, the temperature often reaching 130 degrees or more. But you can't very well "drive your house down the street" to cool it . . . However, you CAN do what really amounts to this. You can install an attic fan and BLOW AWAY the heat in the attic at a cost as low as \$50 and up (installation extra).

Of course, an attic fan does more than just cool the attic. After sundown, when you open all your windows, it pulls in a flood of cool night air from out-of-doors, and circulates it through the house, making all rooms refreshingly comfortable. Depending on the outdoor temperature, you can often cool your house 7 to 14 degrees by this method. The large, powerful blades of the fan produce a complete change of air every one or two minutes, and the cost of operation is only about 1/2c an hour.

Department stores, electrical dealers, and fan dealers will gladly give you full information about this low-cost method of house cooling. Stop in or telephone today. The Detroit Edison Company. (We do not sell or install this equipment.)

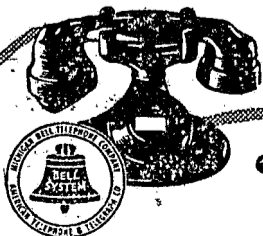

STANDARDIZED TELEPHONE EQUIPMENT MEANS BETTER AND CHEAPER SERVICE

The same telephone equipment . . . designed by the Bell Telephone Laboratories and manufactured by the Western Electric Company . . . is used throughout the Bell System. This centralization of research and manufacture produces the finest standardized equipment in the most economical way. It is one of the reasons why people all over America, including you in Michigan, enjoy better telephone service —and pay less for it—than any other people in the world.
