

Farmers' Day Is September 3 At East Lansing

With new features added this year, the annual Farmers' Day program to be held on Tuesday, September 3, on the Michigan State College campus at East Lansing is expected to prove even more interesting and instructive to the several thousand visitors. Features of the 1946 event include: a dusting and spraying equipment demonstration for farm and orchard use; fly control with DDT; and mow drying of hay with forced, unheated air.

The annual Farmers' Day program is being held in conjunction with the State 4-H Club show because many farm families come to the agricultural college campus for the big farm youth contest of the year. Families are invited to hold picnic lunches noon or

evening under the numerous shade trees on the college campus. Special signs on the campus will direct the visitors to the various demonstrations and exhibits. At the college experiment station, guides will be present throughout the morning and afternoon to explain the experimental projects. Experiments with crop varieties, soils and fertilizing tests, and rotation will be explained and the values of approved methods shown. College livestock will be exhibited in the various barns and the college poultry plant will be open for inspection.

An evening program will be held at 7:30 p. m. in the college auditorium which will feature the 4-H club dress revue.

Farm women will be interested in the various foods and canning demonstrations put on by the 4-H club girls competing in the state contest and in the canning, foods, home improvement, and clothing exhibits.

Rental Housing Urged for Veterans

The solution to G. I. Joe's plight, and that of the whole home-hungry American people, according to Mrs. Samuel L. Roseman, chairman of the National Committee on Housing, is more rental housing.

Under present plans, only a small portion of the veterans' emergency housing is being built for rental purposes, and the bulk of it is to be sold to individual purchasers. This proportion should be reversed.

True, the veteran will have to pay more rent today than he would for a comparable house built before the war, but he will not incur responsibilities that he may not be able to maintain, or tie himself down permanently to an unsatisfactory house. If he loses his job, has to move to another city, or requires more space for a growing family, he will not be stuck with a house and mortgage. While renting, he will still retain for 10 years the privilege of buying a home under the GI Bill, and, later, when prices have become stabilized, he may do so without being victimized.

Sentimentalists and other people with special axes to grind will gamsay this advice. Home-ownership in this country has always been surrounded with an aura of emotional fiddle-faddle. We have been told that a man should own his own little castle for the good of his soul and the sense of security it will give him. Only homeowners, we have been led to believe, can have real civic pride and love of democracy.

Under present-day conditions this is mostly sheer rot. There is no sense of security in being tied to an overgrown mortgage, and when one's little castle starts to crumble about one's ears because the contractor didn't use enough studding, nails, or cement there is nothing in the event to make a man a better citizen. On the contrary, he's apt to become disgruntled and develop a peeve at the whole economic system.

For the sake of emotions, which

may be unpleasant as well as pleasant, and for the other reasons I have mentioned, we should construct thousands of small houses and apartments for rent. There is an enormous permanent demand for such rental housing. This demand has been with us for many, many years and exists particularly at the price levels required by average veterans.

The need for action all along the line—by government, state, and private interest—is an urgent one. Thousands of G. I. Joes are being fleeced and fettered in our growing building orgy, but it is not too late to save millions of others from a similar misfortune. The boom is not yet at its peak. By switching the emphasis of our construction program to rental housing and insisting upon wiser planning and better building, we can still avoid catastrophe and really alleviate our housing needs.

If we do not do this, we shall wake up from our binge a few years hence and find ourselves the unhappy proprietors of thousands of new slums which will plague us esthetically, socially and financially for decades to come.

Home Freezer Unit vs. Food Locker

If you have decided there is an advantage to serving frozen foods to your family and now face the question whether you will patronize a frozen food locker plant or purchase a home freezer unit, you will want a new bulletin released by Michigan State College agricultural experiment station.

Karl D. Bailey, county agricultural agent of Oakland County, recommends "Planning for Frozen Foods", which is circular bulletin 198, available from the county extension office.

Prepared jointly by the sections

of agricultural engineering, home economics, horticulture and animal husbandry, the bulletin goes into many phases of the frozen food problem.

It suggests the amount of frozen foods needed for families of various sizes and the most appropriate time to put into freezers certain food items. Cost of owning a home unit is discussed, taking into consideration operation cost as well as depreciation on investment.

The county agent recommends the bulletin to urban and farm people who plan on freezing food, either in a home freezer unit or in commercially operated plants.

It is estimated that the new Mt. Palomar, Calif., telescope will have a light range of 5,864,896,000,000,000,000 miles.

THE THREE SCOURGES OF MAN

★ Devastating epidemics have ranked with war and famine as population levelers. Of these three scourges of man, pestilence was most dreaded. During the Black Plague epidemic of 1348, it was estimated that in some places over two-thirds of the population was wiped out.

The discovery of bacteria as the cause of infectious disease is still within the memory of the living. Pasteur developed the first vaccine for rabies in 1885. Since that time many immunizing procedures have become routine. As a consequence, deaths from infectious diseases have been drastically reduced.

Everyone should be protected against smallpox and diphtheria as an absolute minimum. Do not wait for an epidemic to break out. Then it is often too late.

We maintain complete stocks of biologicals, subject to the orders of your physician.

Farmers Are Urged To Increase Wheat

Michigan farmers are asked to increase winter wheat acreage by 17 percent over estimated harvested acreage this year and Hubert M. Brown, of the farm crops department at Michigan State College, says the farmer should now be preparing for fall seeding.

The goal set for Michigan is 1,050,000 acres, which is 150,000 more than the good harvest obtained from 900,000 acres this

Something New for Milady

Disc receivers for women's hearing aids now are being concealed in attractively styled jeweled earrings connected by cords with a hidden microphone. The new single unit hearing aids have been made possible by the development of compact "Mini-Max" batteries which gave important service in various fields during the war.

What does it take to run a baby?

Plenty—and plenty of electricity, too. A hungry young citizen needs food—lots of it—often. That food needs preparation—refrigeration—reheating.

Baby needs hot water—lots of it—often. So does his wardrobe. And because Mother worries about germs, she boils practically everything but Baby himself.

Clocks must be dependable when there's a baby in the house. Lights must go on—quick—when he cries out in his sleep. Rooms must be kept warm—the list is endless.

Today's mothers are luckier than those of 20 years ago. With electricity ready at all times—in any quantity—to help with the household chores, mothers have more time to enjoy their youngsters. Never before has electricity done so many tasks for so little cost. Actually, the average family today gets twice as much electricity for its money as it did 20 years ago. Your friends and neighbors in this company—and your own increased usage—helped make that possible.

Frozen Corn-on-Cob Is Now a Reality

Until a method was found to freeze corn successfully, the taste of sweet corn in season was all too brief. Now we can enjoy corn all the year around according to Mary Woodard, home demonstration agent for Oakland County.

As is usual, in successful vegetable freezing, the variety must be right. Golden Cross Bantam and Golden Bantam are the right ones for Michigan. Either variety may

be prepared as cut corn or "corn-on-the-cob".

Since locker space is always at a premium and since the preparation is longer for "corn-on-the-cob", only enough ears should be done for such occasions as holidays and special celebrations.

To get the best results in corn freezing, follow these directions which Miss Woodard says have been tested by Michigan State College specialists:

Harvest ears with well-rounded kernels and sweet flavor.

Husk, silk and trim ears. For cut corn submerge ears in boiling water 3 minutes, cool quickly, cut from cob and pack.

For corn-on-the-cob, submerge in boiling water 8 to 10 minutes, depending on the size of cob, then pack.

Dried corn has been a favorite since colonial days and is relatively easy to do. Husk and trim freshly harvested sweet corn. Steam on cob for 15 minutes or until the milk is set. Cut from the cob and spread one-half inch deep on a cheese cloth covered rack. Turn on current or light gas burn-

er 15 minutes ahead of time. Use the bottom unit only in an electric oven. If there is a regulator set it as low as possible. Prop oven door of gas stove at the top corner with an eight inch stick. If using an electric oven use a one-half inch block to keep door open.

Several racks may be done at once if separated by wooden blocks so air can circulate freely.

Use a thermometer on the top tray and try to keep the heat at 150 degrees F.

About every half hour change position of trays after stirring the contents.

Vegetables take 4 to 12 hours to dry. Corn should be dry enough to shatter when hit with a hammer.

For canned corn, only the whole-grain type is recommended. Cut corn from cob so as to get most of the kernel, but not the husk. To each quart of corn add 1 teaspoon salt and 1 pint boiling water. Heat to boiling and pack hot. Leave 1 inch head space in jars. Add no more salt and no extra water. Adjust lids. Process in pressure cooker 75 minutes at 10 lb. pressure.

ceeded this year. Their estimate as of August 1 shows 4,428,000 bushels. If this record production materializes, it will be 70 per cent over the 10-year average.

This year's crop will be of especially good quality. New methods have been developed which have aided materially in the control of brown rot of peaches, and the dry weather has helped control insect pests and diseases.

The early peaches are now being harvested. The harvest of the major portion of the crop in southwestern Michigan usually starts this week, with the peak of the season around Labor Day. Now is the time for consumers to be making plans to secure their supply of quality Michigan peaches.

are not available, good lawn soil can be prepared. Mr. Bailey suggests you mix one bushel of clay soil, one bushel of muck or peat and two bushels of sandy soil. If a clay loam is available, mix one bushel with one bushel of peat and only one bushel of sandy soil instead of two. On loam or clay subsoils, the layer of topsoil added should be from 6 to 10 inches. If the subsoil is sandy, 10 to 12 inches of topsoil will give better results.

Do not add lime to lawn soils unless tests show the soil strongly acid. After the topsoil has been leveled, broadcast 10 to 15 pounds of 10-6-4 fertilizer per 1,000 square feet and thoroughly rake into the surface soil.

Before seeding, alternately rake and roll the lawn surface until firm. The feet should sink into the soil appreciably when the seedbed is sufficiently firmed. After the soil has been firmed properly, rake lightly over the surface before seeding.

Keep new lawn seedings moist, watering with a fine spray to avoid washing. Begin mowing when the grass has reached a height of 3 inches. Set the mower to cut at a height of 2 inches and maintain grass at this height, the agent recommended.

Scientists have reached the conclusion through astronomical, geological and chemical study that the earth's hard crust was formed not less than 1,600,000,000 years ago.

Michigan Peaches For Everybody
The recent rains gave an additional boost to the peach crop in most of the peach growing areas of Michigan and, more than likely, will help Michigan break all peach production records this season. Charles Figy, Director of the State Department of Agriculture states that according to the Federal-State Crop Reporting Service, last year's record peach crop of 4,400,000 bushels, which broke all previous records, is expected to be exceeded this year.

Now is the Time To Seed New Lawn
August 15 to September 1 is the time to seed a new lawn in lower Michigan, says Karl D. Bailey, county agricultural agent. He outlines important steps which should be taken to establish a new lawn. First, grade the yard properly to set off the buildings and provide desired contours and landscape features. The most satisfactory grades slope gently away from the buildings in all directions. Avoid terraces and steep grades. After the grading is done, add topsoil. Dark colored, sandy loam and loam soils are ideal. If loams

IT TOOK \$13,000 to provide a job for this young lady!

You may never have thought about it this way, but for each Michigan Bell employee there is \$13,000 worth of telephone buildings and equipment.

Where did the money for this telephone "plant" come from?

It came from the sale of Bell System securities to folks who had savings to invest. And, naturally, they want — and are entitled to — a fair return from their investment.

That return must come out of Bell System earnings — the money left after paying wages, taxes, and other operating expenses. But, if earnings are insufficient, investors will not put more money into the telephone business, and Michigan Bell would not be able to expand and improve your service.

Since earnings depend so largely on telephone rates it's important to remember this:

Our "cost of living", like yours, has been rising rapidly. If it continues to go up, rate increases may become necessary to insure adequate earnings. In any event, Michigan Bell wants rates no higher — and no lower — than necessary to operate the business efficiently . . . pay good wages . . . give a fair return to investors and, thereby, protect the future quality of the service we give you.

MICHIGAN BELL TELEPHONE COMPANY
OUR \$150,000,000 POST-WAR PROGRAM MEANS JOBS FOR THOUSANDS

Fifth Graders are Interested Readers

Books hold more interest for pupils in the fifth grade than for those on any other level of the public schools, a survey conducted by a University of Michigan professor of education, reveals.

A study of reading interests of more than 3,500 Michigan school boys and girls showed that interest in reading reaches its maximum in the fifth grade and declines thereafter to a low point

in the tenth grade, Professor Clifford Woody, explained.

Purpose of the study was to find out what types of books have most interest for students to help educators in planning courses of study for maximum pupil interest.

Lag in reading interest in the upper grades does not necessarily mean that those students are learning less, Prof. Woody adds. As pupils advance in age, they become more interested in doing things than in reading about them and there are also demands upon the time of the older students.

If high school students are to take more interest in literature, they will have to spend less time and effort on other school subjects and on outside activities, the educator concludes.

Gold Problem Needs New Approach

Solution of the gold problem, created by the United States owning two-thirds of the world's supply of the precious metal, rests upon the broad changes in trade and commercial practices, according to Leonard L. Watkins, professor of economics at the University of Michigan.

Gold has been flowing into the United States ever since World War I but the movement was ac-

celerated by the devaluation of the dollar in 1934, he reports. Correction of this persistent tendency will be found, if at all, in co-operative action on monetary policy, reduction or abandonment of trade restrictions and discriminations, and restoration of a balanced world trade, the University economist declares.

"The outcome is still in doubt", Prof. Watkins says. "The attitude and policies of Russia are of course crucial. And it is not yet clear that Britain, whose participation in such an international system seems essential, will be able to give full adherence to such a liberal trading program."

Prof. Watkins' views on the gold problem are outlined in an article appearing in the Michigan Alumnus Quarterly Review.

FISH—AND HOW TO SERVE

Twenty attractive ways of serving burbot, the Great Lakes freshwater cousin of the cod, are described in the fourth of a series of color-red folders prepared by the foods and nutrition section of Michigan State College's agricultural experiment station, in cooperation with the Michigan conservation department. Folders issued earlier tell how to prepare carp, suckers and lake herring which, like the burbot, are not now utilized to the extent their food value warrants.

Burbot, commonly known also as lawyer and ling, is said to have firm, white, mild-flavored, flaky flesh resembling ocean cod in appearance, flavor and texture. It is said to be surprisingly free from bones and low in oil, and relished by persons desiring a high protein food low in fats.

A normal adult heart grows heavier as a man grows older, the increase amounting to a little less than half an ounce for every 22 pounds added to body weight. The weight of the average man's heart has been estimated at 11½ ounces.

Oxford Girl Chosen Queen of Festival

Miss Doris Sternberg, 19, of Oxford was chosen to reign over the Michigan Peach Festival, August 31, September 1 and 2 in a contest at the Romeo High School Friday evening. Noreen Warren, 17, of Port Huron and Dorothy Henderson, 18, were named maids of honor. The judges were Donald Schram, state editor of the Detroit Free Press, Rex White of the Detroit News and Ray Marny, artist, of Detroit.

The following girls will make up the balance of the Queen's court: Miss Shirley Wiers of Romeo, Miss Georgia Wellnitz of Mt. Clemens, Miss Evelyn Wieder of Armada, Miss Elsie Visnare of Pontiac, Miss Betty Upleger of Imlay City, Miss Ruth Ledford of Yale, Miss Edna Wolfe of Flint and Miss Gloria Tietz of Lapeer.

The queen and her court attended the baseball game in Detroit Saturday where they presented peaches to Steve O'Neill and the Tigers and to announcer Harry Heilman. On Monday they were outfitted with dresses to be worn during the festival. The queen also presented peaches to Mayor Jeffries on Monday.

Tuesday the queen made a radio broadcast and Wednesday she visited Receiving Hospital in Detroit. Thursday, August 22, she will attend the Lapeer Homecoming at Lapeer. Other events she is scheduled to attend are the Armada Fair, August 24 and the Fireman's Field Day, August 25. She will visit Percy Jones Hospital on August 26 and will make another radio broadcast August 27. On August 28-29 she will go to Washington, D. C. where she will present peaches to President Truman. On Friday, August 30, she will go to Chicago to make a radio broadcast.

The queen and her court will then participate in the Peach Festival activities in Romeo for three days ending with the Queen's Ball Labor Day night.

The worst marine disaster within American continental limits occurred April 27, 1865, when the Mississippi River steambot Sultana's boiler exploded seven miles above Memphis. The dead totaled 1,450, nearly all of them exchanged Union prisoners of war.

COURTS ARE NOT ALWAYS SLOW IN USING INVENTIONS

Although the courts often are accused of being too slow in accepting the benefits of new inventions, radiographs were admitted as evidence in the First District Court in Colorado within a year after Roentgen's discovery of the X-Ray in 1895.

This fact is disclosed in an article written by Charles C. Scott, Kansas City, Missouri, lawyer, for the University of Michigan Law Review.

"Ever since then courts have shown little hesitation in permitting the introduction of X-Ray photographs in evidence", Scott says. "Today the rule is now firmly settled that with certain definite restrictions X-Ray pictures are competent evidence of the internal condition of the human body."

In some Southern states, particularly Alabama, Mississippi and Arkansas, large scale vaccination of dogs has brought a marked reduction in cases of rabies.

Crisp, Cool Salads Please the Family

The wise homemaker, on finding the family in an August eating slump, will resort to cool, colorful and refreshing salads to lure the eye and whet the appetite. Roberta Hershey, extension foods and nutrition specialist at Michigan State College, says the housewife will find it much easier to make pleasing salads than to cook foods that will please on hot August days.

To make salads attractive, take more care in arrangement. Consider the rim of the salad plate the frame of the picture. Place the lettuce so that the outer edges are just within the rim—never hanging over the edge. Foods of harmonizing color should be used. Don't forget a few garnishes to complete the salad picture.

To preserve the crisp, fresh appearance of garden vegetables have them thoroughly chilled. Prepare the foods for salads a day

in advance, and keep them in the refrigerator overnight, Miss Hershey suggests. For example, use celery in fish, egg and vegetable salads; use shredded cabbage or lettuce in shrimp, vegetable or fruit salads.

Tomato slices or wedges, parsley, watercress, sliced cucumber, lemon, grapes, pickles or ripe or green olives are excellent for garnishes in fish salads. Fruit salads become more colorful with halves of strawberries, cherries, fresh mint cubes of red jelly, grapes or nuts as a garnish. Pep up vegetable salads with aspic, cheese or a sprig of parsley.

Mayonnaise and French dressing are made with salad oil and will have to be used sparingly this summer. A good homemade boiled dressing is fine with meat and vegetable salads. Tart fruit juices give excellent contrasts in flavor with naturally sweet fruit salads.

Shade Trees Need Drouth Protection

Dry weather in many sections of Michigan should cause homeowners and farmers to give special attention to the health of shade trees on lawns or along roadsides, according to Dr. Paul A. Herbert, head of the forestry department at Michigan State college.

A tree that is dying or leafing sparsely at the top or ends of the limbs needs special attention to restore its good health. To do this he suggests: (1) a protective mulch over the ground at the base of the tree; (2) fertilizer to provide needed nourishment; (3) extra water for the roots during the growing season.

He explains that trees growing under natural conditions in the forests are protected by a thick mat of dead leaves and twigs which conserves moisture and provides food. Trees on lawns and along roadsides are without this protection and as a result are generally undernourished and thirsty.

Therefore, the first move to save a tree that looks sickly is to restore the natural mulch by covering the ground around the tree with leaves or other decomposed matter. It should be several inches deep and cover an area at least two-thirds the branch spread of the tree. The longer the mulch is left under the tree, the more good it will do for the tree.

To give a tree extra nourishment, Professor Herbert says to apply a pound of ammonium sulfate for each 800 square feet of ground space beneath the tree. Have the ground well soaked with water before the fertilizer is applied and afterwards gently "water" it in.

Most feebly or sickly trees need extra water as well as food. Allow a stream of water to run on a wide area beneath the tree, Herbert suggests.

Council Proceedings

VILLAGE OF CLARKSTON
Oakland County, Michigan
Regular meeting of Clarkston Village Council held August 12, 1946.

Meeting called to order by President Alger.

Public hearing held relating to the following proposed amendment to Ordinance No. 34.

"That that parcel of land hereinafter described shall be, from and after the date of this ordinance, designated as a Commercial District, and the zoning map which constitutes a part of Ordinance No. 34 of the Village of Clarkston shall be changed and show the said parcel of land as a Commercial District.

The parcel of land referred to in this proposed ordinance is described as:
Lot 64 "Assessor's Plat of Clarkston", a replat of part of the original plat of the Village of Clarkston and all of Cobb's Addition; also a subdivision of part of the South 1/2 of Section 20 and of part of the Northwest 1/4 of Section 29, Town 4 North, Range 9 East, Village of Clarkston, Oakland County, Michigan, as recorded in Liber 35 of Plats, page 47 of the Oakland County Records.

After all persons present had been given an opportunity to express themselves the hearing was declared closed.

Roll call: Dunston, Holcomb, O'Roark, Squier, Waters—present. Megee—absent.

Minutes of July 1 Regular Meeting read and approved as read.

Following accounts payable reviewed:

Mich. Bell Tel. Co., fire telephone, \$9.40; Detroit Edison Co. (street lights \$67.45, siren 90, hall \$1.89) \$70.24; Harold Whipple, labor on streets, \$117.80; Beattie Motor Sales, road service, tube for dump truck, \$12.92; Oakland County Road Commission, chloride streets, \$81.97; Foley-Bearslee, 17 yards street gravel, \$10.20; Clarkston Coal Co., coal for hall, \$24.36; Miller-Bearslee, cement, \$1.40; Ben Comstock, paint doors village hall; traffic signs, \$14.25; Wm. Adams, labor, \$8.00; Alger Hardware, paint, brushes, bolts, \$11.09; Wompole's Landscape Service, repair 5 trees, \$6.00; Automobile Equipment Co., red flare kit, \$5.10; Clarkston News, July proceedings, Ordinance No. 37, Notices, \$40.90; Oakland Mill Supply Co., regrind bearings, \$1.89; Clarkston State Bank, Bond No. 8, interest on No. 8, 9 and 10, \$1,045.00; Pelton, McGee, Howlett and Hartman, legal advice, \$23.00; Oakland County Treasurer, Addressograph tax statements, \$6.00; Ed. Seeterlin, July salary, \$50.00; Seeterlin Bros., oil drums, repairs to fire truck, \$47.45; Don Beach, (July salary, \$37.50; fire calls, \$5.00; express paid, \$3.50), \$46.00; R. Morgan, fire calls, \$2.00; F. Hemingway, fire calls, \$3.00; J. Hemingway, fire calls, \$2.00; W. Wilson, fire calls, \$2.00; John Adams, fire calls, \$2.00; Floyd Towers, fire calls, \$2.00; E. Seeterlin, fire calls, \$2.00; Morgan and Son, gasoline, oil, \$8.46.

Moved by Dunston that above accounts be paid. Seconded by O'Roark. Roll: Dunston, Holcomb, O'Roark, Squier, Waters—yea. Megee—absent. Motion carried.

Moved by Trustee Waters that

the following Ordinance No. 38 be adopted.

Motion seconded by Dunston. Roll: Dunston, yea; Holcomb, yea; Megee, absent; O'Roark, yea; Squier, yea; Waters, yea. Motion carried.

Moved by Dunston that meeting adjourn. Seconded by O'Roark. Motion carried.

RUSSELL COLTSON, Village Clerk.

ORDINANCE NO. 38

An ordinance to amend the zoning map which constitutes a part of Ordinance No. 34 in the Village of Clarkston only to the extent as hereinafter appears.

The Village of Clarkston Ordains: That that parcel of land hereinafter described shall be, from and after the date of this ordinance, designated as a Commercial District, and the zoning map which constitutes a part of Ordinance No. 34 of the Village of Clarkston shall be changed and show said parcel of land as a Commercial District. The parcel of land referred to in this ordinance is described as follows:

Lot 64 "Assessor's Plat of Clarkston", a replat of part of the original plat of the Village of Clarkston and all of Cobb's Addition; also a subdivision of part of the South 1/2 of Section 20 and of part of the Northwest 1/4 of Section 29, Town 4 North, Range 9 East, Village of Clarkston, Oakland County, Michigan, as recorded in Liber 35 of Plats, page 47 of the Oakland County Records.

ROY A. ALGER, Village President.
RUSSELL COLTSON, Village Clerk.

VALUE OF WALNUT WOOD GOES TO NEW HEIGHTS

The value of walnut wood has gone so high that farmers harvesting walnut trees from their woodlots for the mill in Hudson, Mich., are not cutting them down any more, they are digging them up. The extra lumber obtained from the stump makes the added labor of digging and cutting the roots worthwhile, they say.

Conservation department "farm foresters" who visit and advise southern Michigan woodlot owners on harvesting and marketing their "ripe" trees point out that 95 per cent of the southern Michigan production is hardwood suitable for furniture, flooring, implement handles and like high-quality uses.

A revised edition of bulletin 152, "Rasberry Growing in Michigan," has been released by Michigan State college Agricultural Experiment station. It is available, to those interested, from county agricultural agents or from The Bulletin Office, Department of Public Relations, Michigan State college, East Lansing.

There is no clay in a modern clay pigeon. These extremely brittle trapshooting targets are made of molten pitch, mixed with pulverized limestone and poured into water cooled moulds.

Attack Launched On Peach Brown Rot

Brown rot, which is declared by horticulturists to be the number one enemy of the Michigan peach grower, is to be the object of a concerted attack this season.

Experiments in peach marketing, conducted for the past three years by Michigan State College in cooperation with the Millburg Fruit Exchange and A & P Food Stores, will this year emphasize brown rot control through the use of approximately a dozen preventive dusts on large size lots, it is announced by Dr. H. B. Tukey, head of MSC's horticultural department.

"Hundreds of thousands of dollars are lost annually to Michigan producers because of the ravages of this fungus disease", Dr. Tukey said. "Its control should, it is estimated, reduce by more than half the total waste and spoilage of Michigan peaches during the marketing process".

The peach program this year also includes extensive market tests of a cell-type shipping container developed during the past two years. The food chain plans

distribution of this container to all its Detroit area outlets during the Elberta season, Dr. Tukey said, with prospects that from 12,000 to 20,000 of the half bushel, fiber-board boxes will be moved to consumers.

In previous sales tests this container was found to make practical the marketing of a tree-ripened peach through the elimination of almost all serious damage due to bruising and the material reduction of minor bruising.

This peach project is part of a long-range research program being directed by the Michigan State College marketing committee, of which Dr. Herman Wyngarden, head of the department of economics, is chairman. The peach work will be carried on by Dr. Arthur Mauch, Dr. M. E. Cravens and H. P. Gaston, all of the college staff.
