Then they will board a fast train for Detroit.

ARTICLES ON RECORDS

Don't you think that when you have something to look forward to your work seems easier? A very good example of this is the records we play in our Eighth Grade English Class on Mondays after all our work is finished. We all look forward to this and so really enjoy our work much more, besides that we become better acquainted with different kinds of music. So it provides education as well as enjoyment for us.

Perhaps you would like to know something about our programs. First of all a member of the class is chosen each week to take care of the record program and he must tell something about it.

The first class was taken over by our teacher, Mrs. Clark. The program consisted of a Tschaikowsky piano concerto with Arthur Rubenstein as the pianist and the London Symphony Orchestra with told us some very interesting our English Class managed to motor. Barbarilo conducting, Mrs. Clark things about the composer and keep their records clear. conductor.

Mr. Groven was kind enough to loan us two albums of records. The first, "Lost Horizon", with Ronald Coleman taking the leading part. The second was "Treasure Island", a very fascinating story with Thomas Mitchell as the very lovable Long John Silver. This program was taken over by Jim Huttenlocher.

A group of modern, popular music was next on the list. This program was Westley Smith's. He told some things about the music A few of the records were, "The Anniversary Song", taken from a

> The last program that I shall tell you about was Pat Carpenter's job. It was an album of Rimsky-Korsakov's music. Pat told something about Rimsky-Korsakov's life. The music was picked by Mrs. Clark: It was very good music.

I think these programs are very nice and I look forward to them very much and hope they will continue for the remainder of the school year.

> POTATO GROWERS WANT BIG YIELD

Michigan potato growers are seeking big yields of quality potatoes. H. C. Moore, potato specialist at Michigan State college says that high yields mean lower production costs per bushel, and good quality means better sales and improved consumer demand.

Good seed properly planted will do much to increase potato production and quality, says Moore. Last year certified seed was an important factor in producing an average yield per acre of 405 bushels for the 319 members of Michigan's "300 Bushel" club. A limited supply of certifed seed of some varieties is available for table stock producers. Growers can locate sources of certified seed through offices of county agricultural agents or through the farm' crops office, Michigan State col-

Lawrence Giddings and Mrs. and reduces seed piece decay. Green sprouting is done by placing the seed in a layer six or eight inches deep on a floor where it is light and there is no danger from frost injury. This should be done two weeks before planting time. Seed should be cut in large blocky pieces about $1\frac{1}{2} - 2$ ounces in weight. Each seed piece should have two or more eyes or sprouts. Best results are obtained when seed is planted the same day it is cut. Seed should be planted about 4 inches deep in a cool, moist soil. On upland soils, a complete fertilizer of 3-12-12 or similar analysis shoud be placed in the furrow at time of planting. Fertilizer should not come in contact with seed.

IN LAWNS NOW

The months of May and June are good months to begin the control of weeds in lawns with 2, 4-D, ultural agent for Oakland county. All 2, 4-D weed killers are most plants,

effective when soils are moist. Directions for use are included on the ommendations should be followed closely. The quantity of solution to be used on a unit area depends upon the amount of weed growth that must be covered. The leaves of all weed plants should be wet by the spray solution. Three to four quarts per square rod will isually give a satisfactory control of most lawn weeds.

From where I sit ... by Joe Marsh Industry Looks at

Our Town

Maybe you read how a group of industrial experts have decided that the small town is the place for industry-not big cities. Reasons they give are better housing, pleasanter living, and more opportunity for wholesome recreation.

Well, looking around our town I'd say that was about right. Most of us own our homes, and keep them looking nice; we enjoy each other's company: and our recreations are mostly simple outdoor sports, and in the evening a mellow glass of beer with pleasant company.

As Doc Walters says, that sort of life just naturally sets you up for work the next day . . . whether it's in office, mill, or field. And Doc should know. He works fourteen hours, but never misses his morning "constitutional" or his evening glass of beer with friends.

From where I sit, any industry could profit from being in a town where wholesome living, temperance, and friendship are the rule.

Apple Tree Pests Can Be Controlled

After three years of orchard testing, a combination spray containing the famous DDT and another powerful insecticide, DN111, appears to be the answer to control of codling moth and red mite, two of the most destructive apple tree pests, W. W. Allen, manager of the Dow Chemical Company's technicwalls and ceiling. Use a coarse al service and development dispray and don't rub the liquid vision, said today in making 1947

spray recommendations. While tests definitely established DDT as the No. 1 insecticide for combatting codling moth, they also revealed that it not only does not harm the red mite but actually kills many natural enemies of the mite, with the result that mite popuations tend to build up after application of DDT, he declared. Technicians solved this problem by using DN 111 with DDT in a dual action spray, the former knocking out the mite and the latter, the codling moth, he added. The combination can be used successfully whenever inspection of trees shows a red mite problem developing, Allen said. The presence of one or two mites per leaf is the "danger signal", and the DDT-DN 111 spray should be applied as soon as possible, he pointed out. Where application of DDT To those who have been so is not immediately required, DN-

The important thing is to take prompt action in combatting the mites, Allen emphasized. Otherwise they may build up to damaging proportions.

The red mite is a tiny, spiderlike insect that lives on the under side of apple leaves, feeding on the plant juices and thus devitalizing the trees. Mite damage, Allen said, some growers may wrongly attribute to drouth or other factors. George Elliott After bronzing has occurred, the damage has been done and it is too late for the most effective treatment, he declared.
