Oxford, Michigan  
Sunday Service 11:00 A.M.  
Sunday School 11:00 A.M.

The life of Abraham will be reviewed next Sunday at Christian Science churches to show how "faith is the substance of things hoped for, the evidence of things not seen" (Heb. 11).

The subject of the Bible Lesson is "Substance," and the Golden escrip vid v ri o hTcP C9w p-fdet Text is from Galatians 3: "They which be of faith are blessed with faithful Abraham."

Selections from "Science and Health with Key to the Scriptures" by Mary Baker Eddy will include a description of Abraham as an example of "Fidelity: faith in the divine Life and in the eternal Prin-

ciple of being. This patriarch illustrated the purpose of Love to create trust in good, and showed the life-preserving power of spiritual understanding" p. 579).

**Harvest Moon Time Again**

This year's Harvest Moon has an added special feature: its first appearance will be on the last day of summer (Sept. 21).

Although the Harvest Moon is the full moon that occurs nearest the date of the autumnal equinox (Sept. 22), it seldom comes the day before the equinox.

"The Harvest Moon is different from those of other months, in that the delay in rising from night to night is short," University of Michigan astronomer Hazel M. Losh says.

On the average, the moon rises nearly an hour later each night, but this delay varies considerably during the year due to the angle that the moon's path makes with the eastern horizon.

In the autumn, this retardation is the shortest of the whole year, being around 20 minutes in contrast to more than an hour in the

spring, and because very noticeable.

"The nearly full moon will rise at approximately the same hour for several successive nights, and hence there will be bright moonlight in the early evening a traditional aid to harvesters," Professor Losh says.

The Harvest Moon is likely to appear larger than usual and take on quite a reddish appearance near the horizon. This is due to the condition of the earth's atmosphere, and not to the moon itself, Professor Losh explains. The molecules of the air and the dust particles, suspended in it, scatter the light, the blue considerably more than the red.

The apparently larger size of the full moon near the horizon is an optical illusion, and again has nothing to do with the moon itself, Professor Losh points out.

## Know Your Michigan Law

By Attorney General Frank J. Kelly

(This is a public service article explaining in general terms a provision of Michigan law. Individuals who wish to determine the effect of any law upon their private legal affairs should consult a private attorney.)

When does a new law take effect?

The answer to that question can have an important impact on many of your rights.

The effective date of a new law depends upon the terms of the particular law. When the new law does not mention an effective date, the law does not go into effect until 90 days after the end of the legislative session at which it was passed.

The reason is that the Michigan Constitution provides for this 90-day period in such instances.

In some cases the new law specifies an effective date later than 90 days after the end of the legislative session. An example is the 1963 law concerning with safety belts for certain motor vehicles. It provides in part:

"No private passenger vehicle manufactured after January 1, 1965 shall be offered for sale in this state unless the vehicles is equipped with safety belts for the use of the driver and 1 other front seat passenger."

In other cases, the law may specify that it is to take immediate effect. Under the Constitution this requires a two-thirds vote of the members elected to and serving in each house of the legislature. An illustration of a law given immediate effect by the legislature is the law approved this year requiring that the motor vehicle operator's license of a minor shall be a color different from those issued to persons who have attained 21 years of age.

If you have a question concerning the effective date of a new law, you may determine the answer by contacting the Secretary of State or the office of the Attorney General.

## Wash Clothes In Cold Water?

Cold water detergents for your home laundry? Try them, say Michigan State University home economists, but proceed slowly and thoughtfully.

The new cold water detergents do mean less shrinkage, less fading and ironing, according to Georglaine Baker, home management specialist with the MSU Cooperative Extension Service. And they are a boon to clothes that need warm or cold water wash.

Industry representatives also say that cold water detergents prevent stains from setting, save on heating bills, insure longer fabric life and save hot water for other uses.

But even industry home economists admit that there are times when hot water must be used to dissolve greasy soils. Miss Baker also notes that equipment manufacturers are still recommending hot water for white sturdy items that contain hard-to-remove oily soils such as children's underwear, sheets and pillow cases.

She further points out that some of the detergents contain a large amount of brightener. This means the fabrics may look whiter, brighter, and cleaner even when they are not necessarily soil free.

## Precautions Should Be Taken For Hot Weather Training

The American Medical Association's Committee on the Medical Aspects of Sports once again has issued its annual pre-fall admonition regarding early season football practice in hot weather.

Special precautions should be observed to safeguard the health of college and high school athletes at the outset of the season, especially when the practice periods are conducted in very warm and highly humid weather.

The tens of thousands of youths who will shortly be trying to make the school teams all over the nation will be subject to heat exhaustion or heat stroke if care is not observed. Heat exhaustion follows depletion of salt and water due to excess sweating. In heat stroke, the body overheats due to lack of sweating.

The old idea that water should be withheld from athletes during workouts has long since been disproved. In fact, it's necessary to replace water lost through sweating to prevent heat exhaustion. This is best done by occasional drinks of small amounts of water, perhaps half a glass.

Salt needs to be replaced daily,

particularly during the acclimatization period. Extra salting of food within the bounds of taste will accomplish this. Salt tablets, particularly on an empty stomach, can be irritating and may be poorly absorbed. Adding one teaspoon of salt to six quarts of water used for drinking during hot-weather workouts offers another approach.

Frequent rest periods during hot weather workouts are recommended. Coaches are urged to watch players closely for signs of lethargy, inattention, stupor, awkwardness or unusual fatigue. Symptoms of water and salt depletion may include headache, nausea, hallucinations and work and rapid pulse.

The AMA Committee, composed of physicians with particular interest in sports medicine, offers some points to help coaches prevent heat exhaustion and heat stroke in their young players:

1. Require a careful medical history and checkup prior to beginning of practice.
2. Schedule workouts during cooler morning and early evening hours in hot weather.
3. Acclimatize athletes to hot weather by carefully graduated practice schedules.

4. Provide rest periods of 15 to 30 minutes during workouts of an hour or more in hot weather.

5. Supply white clothing (to reflect heat) which is loose and comfortable (to permit heat escape) and permeable to moisture (to allow heat loss via sweat).

6. Furnish extra salt and water in recommended amounts.

7. Watch athletes carefully for signs of trouble, particularly the determined youngster who may not report discomfort.

8. Remember that the temperature and humidity, not the sun, are the important factors. Heat exhaustion and heat stroke can occur in the shade.

## Area Men In Uniform

James R. McCormick, 18, son of Mr. and Mrs. Robert McCormick of 9947 Dixie Hwy., Clarkston, recently completed basic training at the Naval Training Center, Great Lakes, Ill.

The nine-week training includes naval orientation, history and organization, seamanship, ordnance and gunnery, military drill, first aid and survival.

During the training recruits receive tests and interviews which determine their future assignments in the Navy. Upon completing the program they are assigned to service schools for technical training or to ships and stations for on-the-job training in a Navy rating specialty.

Naval training produces the power in seapower by supplying personnel to man the ships, planes and shore stations of today's Navy.

Norman E. Warren Jr., 17, son of Mr. and Mrs. Norman E. Warren of 6033 Northup, Waterford, recently completed basic training at the Naval Training Center, Great Lakes, Ill.

The nine-week training includes naval orientation, history and organization, seamanship, ordnance and gunnery, military drill, first aid and survival.

During the training recruits receive tests and interviews which determine their future assignments in the Navy. Upon completing the program they are assigned to service schools for technical training or to ships and stations for on-the-job training in a Navy rating specialty.

Naval training produces the power in seapower by supplying personnel to man the ships, planes and shore stations of today's Navy.

## Interchange To Be Altered

The State Highway Department announced today that it plans to make changes on M-54 (Dixie Highway) at I-75 south of Flint.

Chief Engineer John E. Meyer said the revisions will be made at the point where M-54 changes into a divided highway at the interchange.

He said the Highway Department will remove about 800 square yards of pavement, repave portions of the highway, make various traffic signing changes and repaint stripes on the highway in an effort to avoid possible head-on collisions.

Removal of some of the pavement will more clearly define the north and southbound lanes and will eliminate driver confusion, Meyer said.

A "task force" of traffic engineers studying traffic patterns on the highway noted that about one southbound driver per hour failed to notice that the highway was divided and drove into the northbound lanes of the divided highway.

"Any one of these vehicles was a potential head-on collision which could have resulted in fatalities," he said.

Until the work begins, the Highway Department will use temporary orange-colored fluorescent traffic cones in advance of the divided highway to discourage wrong-way movements.

The one on top is a world famous legend. The one below it is the same legend redesigned into an all new station wagon.  
It has the deluxe interior appointments and comfortable ride of a fine passenger car... carries six big adults plus more luggage and equipment than you can imagine. It's powered by America's only automotive overhead cam engine, the high torque Tornado OHC... offers optional extras such as automatic transmission, independent front suspension, power steering and power brakes. But the all new Wagoneer is really a 'Jeep' vehicle at heart.  
The 'Jeep' Wagoneer goes up steep hills, over rough rugged terrain and through snow and mud that leave other cars helpless. And around slippery turns that cause fishtailing and skidding, it hugs the road with traditional 'Jeep' traction.  
The big reason is 4-wheel 'Drivepower.' All four wheels are power wheels instead of just two. Take a demonstration drive soon. You've never driven a car that can do the things this one can.

Lake Michigan

James Beach of White Lake Rd. has returned after a three week trip to Debois, Wyoming. He was the guest of the Jyleen Bar Ranch. While visiting Yellowstone National Park, he picked strawberries after a snowfall.

On the return trip home, James spent 2 days in Chicago.

The J. R. Sansom family has returned from a varied trip to the North which included a stay on St. Joseph Island, Canada. From there a visit was paid to upper and lower Tahquamenon Falls, in the upper Peninsula.

The highlight of the trip was a boat ride through the busiest "Locks" in the world, the "soo". (Sault St. Marie)

The second half of the trip was spent mostly in the lower Peninsula, at the Harrison, Mich. cabin of the senior Sansoms.

Daughter Jill had her 13th birthday en route.

Mr. and Mrs. Richard Roy and children, Gregory and Tracy, are at home in their new Cape Cod house on Clarkston Rd. Mrs. Roy is the former Kay Kath.

Mr. and Mrs. Vernon Kath of Hummingbird Ln. returned home early this week after a weeks vacation visiting his mother, Mrs. Carrie Kath of Cross Village on

they attended the Curson family reunion.

Mr. and Mrs. Maurice Collins, with their five children Sheryl, Michael, Mitchell, John and Cathy, have returned to their Maple Dr. home winding up a 4,000 miles jaunt with the family camper. The first leg of the trip saw them at Cave City, Arkansas where they enjoyed a weeks stay with her mother and her husband Mr. and Mrs. Melvin Blancet. From there they traveled to Odessa, Texas to visit his parents the Lee Collins' and grandmother Mrs. F. C. Collins before heading on to Roswell, New Mexico to see his two sisters and their families.

Mr. William A. Fisher, a former resident of Farmington, is now making his home with his daughter and family the Thomas Moyle's of E. Church St. Mr. Fisher is retired after being with the Postal Transportation service for the past 30 years.

Mr. and Mrs. Gordon Bray played hosts to some 50 guests honoring the 25th wedding anniversary of her parents, the Carl Hoffmann's last Monday night. The Hoffmann's new home on Whipple Shores Dr. was the setting for the affair. A Hawaiian motif was carried throughout the evening with authentic Hawaiian leis flown in from Hawaii for the occasion. This was also a farewell party as Mr. and Mrs. Hoffman left today for a three weeks vacation in Hawaii. They will stop at Colorado State University where another daughter, Judy, will enroll as a freshman.

Mr. and Mrs. Dewaine Haggadone with their daughters, Delaine and Delynn of Amy Dr. spent the Labor Day weekend at their cabin located at North Lake, Glennie, Mich.

Mr. and Mrs. Delford Curson, with their children, Allen, Linda and Laurie of Sunnydale, spent Labor Day in Port Huron where

# GOVERNOR ROMNEY REPORTS

es recently that have gained a good deal of attention. Business and industrial expansions in Michigan have taken most of the spotlight. But there are other barometers that indicate progress, too.

Things are booming in the Michigan construction industry. Construction employment in July of this year was 118,400. That is more people than have been working in construction in Michigan since 1956. The July construction employment figures are up 11,500 over June, and up 10,000 over July a year ago, and compared to two years ago, there are more than 30,000 more construction jobs today.

Another economic indicator: June contracts for future construction in Michigan totalled more than 181 million, an increase of 26 percent compared to June of 1963. And the cumulative total of construction contracts for the first six months of 1964 amounted to more than \$909 million, or an increase of 31 percent over the same period in 1963.

Of course, the economy of the

Mr. J. Forrest Glennie of Kingfisher Ln. returned home recently, after flying to Kirkwood, Missouri for the birth of her new granddaughter, Marcie Ellen who was born August 7. The proud parents are Marilyn and David Lee. Mr. Glennie arrived later to see his new grandchild. Grandparents on the esquire side are the Leslie G. Lee's of Northville.

# TIPS FROM THE TACKLE BOX

by B. F. GLADDING

## Lead In The Head!

USE A LEAD CORE line for fly fishing? Sounds crazy, but a shooting head of lead core line is the answer to deep water fly fishing. The secret lies in a unique line called the "Mark Five Special," a product of B. F. Gladding & Co., Inc., of South Oselec, New York, the only lead core line on the market with a hard, glossy fly-line finish.

A 30-ft. shooting head of this line in 18 pound test will balance the action of the powerful rod needed for this business. This should be smoothly spliced to as much 20 to 30 pound test monofilament as is needed for running line. Splice a short length of the same to the opposite end and build up leaders from that.

Don't false cast. Work the head clear of the guides on a strip monofilament from the reel for the shoot. Make a single back cast. Beef into it with the rod and turn the shooting line loose. The lead core head will take off with the speed of an arrow, carrying an amazing yardage of monofilament behind it on the "shoot."

But the real objective is to get the fly — usually a streamer — down to the fish. The lead head quickly does that, permitting you to make close-to-bottom retrieves in really deep water.

To make your next cast the easy way, pick up the lead core line for a roll cast, as illustrated. First bring the rod, and line to the position in Drawing A.

Then, drive the rod down and forward to lift the line off the water, as in Drawing B. Now, make the back cast.

To make your next cast the easy way, pick up the lead core line for a roll cast, as illustrated. First bring the rod, and line to the position in Drawing A.

Then, drive the rod down and forward to lift the line off the water, as in Drawing B. Now, make the back cast.

Salt water fly fishermen have been foremost in taking advantage of this boon, but the field is wide open to fresh water anglers. Landlocked salmon, lakereels, trout, bass and walleyes usually go deep in hot weather. Yet they'll all smack a streamer — if you get it down to 'em.

# Two New Laws Aid Auto Drivers

The State Police have called attention to two new Michigan laws now effective which specifically prohibit pedestrian traffic, including hitchhiking, on all limited access highways and drag racing by motor vehicles on any highway.

The one involving pedestrians also bans bicycles and other non-motorized traffic on the limited access highways. This is an extension or amendment of a previous law which affected freeways only in these respects. The freeways are the controlled access highways.

The pedestrian ban is designed to increase safety factors for travelers on the high speed roads. It is pointed out that the stopping of vehicles to pick up or let hitchhikers off creates a hazard for

other traffic. Hitchhiking on the freeways, a practice followed by some college students and other persons going to and from their homes particularly on weekends and vacation periods, has added to the enforcement problem of police patrols in having to remove the pedestrians from these roads. Pedestrian trespassers can now be also arrested on the limited access roads as well as the freeways.

The drag racing ban specifically strengthens law enforcement's hand in dealing with drivers who have staged impromptu or planned racing contests on the streets and highways. These contests have endangered participants and, in some cases, resulted in death or injury to them as well as having caused accidents for other highway users.

# Fun At The NY World's Fair

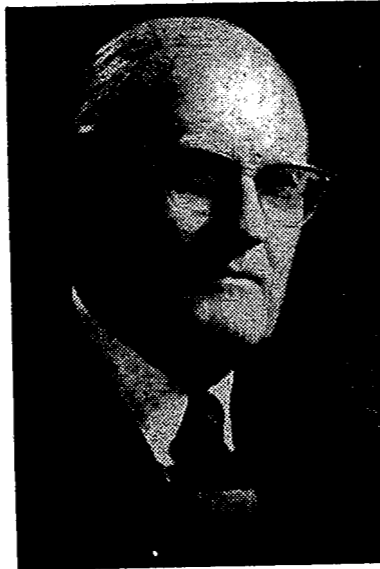

The Log Flume Ride, one of the many exciting attractions in the Lake Amusement Area, shoots a log-shaped boat at 10 feet a second along a steeply inclined and curved channel, ends in a thrilling splash as the big log whisks down a 45-degree slide into swirling rapids.

# Eye Functions Probed in U of M Vision Research

Serious visual handicaps are often exaggerated conditions of "normal" eye characteristics, says a University of Michigan researcher. Take colorblindness, for example. Totally colorblind individuals see only black, white and shades of gray. But examining them, scientists are learning more about the intricate mechanisms which enable the normal person to distinguish different colors.

This is one of the areas being explored in the U-M Vision Research Laboratories, headed by Dr. Mat hew Alpern.

Psychologists and physiologists in the laboratories are probing such other facets of human vision as:

Contrast perception: Why does a gray square on a black surface appear lighter than the same square on a white background?

Seeing in the dark.

The "smudging" of an image as it is formed in the retina.

To pursue these studies, the lab employs some of the most sophisticated apparatus in the U-M Medical Center.

Dr. Thomas Aiba uses contact lenses, wired to electronic computers, to measure the electrical responses of the eye to a blinking light.

An apparatus called a pupillometer is now being designed accord-

ing to U-M specifications. It will take the place of a camera to record and measure change in pupil size following a flash of light. The vision researchers will use it to assemble data on why shorter light flashes appear brighter and longer ones.

The device will be purchased by

department, have screened more than 1000 patients who have been under treatment in the department. Dr. Harold F. Falls directs the ophthalmological aspects of the project.

Patients whose visual problems appear to be "the most informative" for the studies are invited to participate, Dr. Alpern says.

Some research funds are used to compensate these individuals for time lost from work and missed meals because of the projects and to cover their transportation to the Medical Center for the research tests.

Since 1958 Dr. Alpern and Gilbert Lee, Jr., research associate in University Hospital's ophthalmology

# U of M Program on Southern Asia Has High Rating

ANN ARBOR. What the headlines say about Southern Asia might seem remote from The University of Michigan, but the link between Ann Arbor and Asia has acquired increasing breadth and depth since the last century.

The University's Southern Asian program is considered one of the four or five leading programs in the country.

While Southern Asia has been very much in the news in recent years, the University's active interest in that region has resulted in such activities as these:

The Center for Southern Asian Studies, an inter-disciplinary unit coordinates the planning of curricular, developmental and research activities dealing with the region extending from Pakistan in the west to the Philippines in the east.

The U-M Television Center has produced a 10-part TV series on "Southeast Asia: Crossroad in Crisis," now being shown throughout the country.

This summer, with a Ford Foundation grant, the University conducted intensive seminars for teachers from other liberal arts colleges to help expand and strengthen their undergraduate programs in Southeast Asian studies.

The University is participating in the massive International Indian

Ocean Expedition for studies of weather. An atomic radiation process to prevent insect infestation of wheat, developed by U-M Prof. Lloyd E. Brownell, may lead to construction in India of a prototype processing plant.

The University this term became the nation's first state-supported university to offer a course on the history of Southeast Asia.
